Midjourney Parameters & Settings
## Cheat Sheet for Writing MidJourney Prompts

Midjourney is a powerful AI image generation tool that creates stunning visuals based on text prompts. Crafting an effective prompt is key to getting the best results. This cheat sheet covers the basics of prompt structure and use of parameters on the Midjourney.com website.

To get started in Midjourney, click on the Create option on the left to start creating images. The imagine bar is where you enter your prompt and include images if needed. After entering your prompt, hit the enter key on your keyboard. Midjourney will create 4 images for each prompt.

Upload Reference Image   Imagine Bar   Settings

illustration of a river valley, spring time with flowers in bloom, a hawk flying in the distance --ar 4:3   Q Search

Today

Illustration of a river valley, spring time with flowers in bloom, a hawk flying in the distance

ar 4:3

Prompt Structure Basics: Not limited to, and no need to include all descriptors below.
-**Subject**: The main focus of your image. A person, object, location, building...
-**Medium**: An illustration, realistic photo, painting...
-**Environment**: Indoors, outdoors, forest, city, ocean...
-**Lighting**: Diffused light, twilight, studio lights, cinematic, soft...
-**Mood**: Dreamy, haunting, joyful, enchanted, dramatic...
-**Composition**: Portrait, wide-angle, closeup, drone view...
-**Color Scheme**: Monochromatic, warm colors, sunset palette...
-**Parameters**: These ALWAYS come at the end of a prompt. Aspect ratio --ar, quality --q, stylization --s.

Your prompt should be brief and specific. Avoid filler words and unnecessary details.
3 - 7 words gives Midjourney more creative freedom but may lack detail with unpredictable results.
A medium length prompt of 8 - 15 words will give more detail but still let Midjourney be creative.
Long prompts of 16 or more words gives precise control but may introduce too many elements.

Use the list of descriptive words on this cheat sheet. That includes using famous artists as references. Or specific art styles. Adjust your parameters and styles for different results.
The order of the words in your prompt matters. The words at the beginning of a prompt have more emphasis. Weights (::) can be used to emphasis specific words. Ex. flowers::1 hawk::3

Words enclosed in double quotations marks will make those words appear in the image.
Ex. A movie poster with the title "Scary Clown Town" at the bottom.
Avoid negative words. Instead of writing "no white cats". Use --no white cats

Crafting effective MidJourney prompts requires clarity, creativity, and experimentation. Start with a strong subject, use vivid descriptions, arrange words strategically, and refine with parameters. With practice, you'll be able to generate stunning AI-generated artwork that aligns with your vision. ChatGPT is a great resource for inspiration. Describe what you want and ChatGPT will create several prompts.

Visit Midjourney to learn more about settings and how to modify your images.
https://docs.midjourney.com/hc/en-us/articles/33329261836941-Getting-Started-Guide

Midjourney Parameters & Settings
Cheat Sheet for Writing MidJourney Prompts

MidJourney provides a variety of settings controls that allow users to fine-tune their image generation experience. These settings can be accessed by clicking on the settings in the imagine bar. These are your default settings on the Midjourney.com website. Use the slider bars to adjust the settings. These settings will be applied to your images unless you use a special command (listed on the next 2 pages) to make changes for a specific prompt. For example, a prompt of: "a dragon flying over a castle" will create a set of images with an aspect ration of 1:1 with stylization of 100.

To adjust the aspect ratio and stylization one time.
Enter: "a dragon flying over a castle --ar 4:3 --s 350"
This will create a set of images with an aspect ratio of 4:3 and a stylization of 350.

Settings   Q Search

Adjust your prompt's settings

Image Size or Aspect Ratio: Specify the width to height ratio. Use the slider bar to adjust the aspect ratio.

Image Size

Portrait   Square   Landscape

1:1 | Portrait | **Square** | Landscape |

Stylization: Controls how realistic or artistic an image is. Range 0 - 1000
0 = More Realistic. 1000 = More Artistic.

Weirdness: Controls how realistic or artistic an image is. Range 0 - 3000
0 = Realistic, follows prompt.
1000 = Artistic. Unique, unexpected effects.

Aesthetics

Stylization

Weirdness

Variety

Variety or Chaos: Creates more diverse and unexpected results. Range 0 - 100
with 100 = more chaos.

Standard Mode: MidJourney applies its default aesthetic enhancements, making images look more refined, artistic, and aligned with its typical "MidJourney style."
Raw Mode: Reduces MidJourney's automatic enhancements, giving a result closer to a "raw" interpretation of your prompt.

Model

     Standard Raw

Mode | **Standard** | Raw |

Version   6.1 ∨

     On Off

Personalize | On | **Off** |

Speed | **Relax** | Fast | Turbo |

Relax Fast Turbo

Version: Switching versions can completely change your results.
Key Differences Summary:

| Model	Style	Detail	Best For
v4	Painterly	Medium	Artistic, dreamy images
v5	Photorealistic	High	Realism, portraits, products
v6	Ultra-realistic	Very High	Professional work, fine details
Niji	Anime	High	Cartoons, character art

Personalize On/Off: The personalization option allows you to influence the AI's output to better match your preferred aesthetic, making images feel more unique to your taste. From the homepage, click Personalize from the left menu. Click the Create Standard Profile. You can create multiple Profiles and Moodboards.
Detailed steps: https://docs.midjourney.com/hc/en-us/articles/32433330574221-Personalization

Speed: Run a job at a different speed. Fast is the default.
Relax (Lower Speed): Higher quality more detailed images. Less GPU load.
Fast (Default): A balance between quality and speed.
Turbo (Higher Speed): May slightly reduce image quality or detail. Uses more GPU time per job.

Midjourney Parameters

A prompt parameter is a special modifier you add to your prompt to customize how the AI generates an image. These parameters allow you to control aspects like aspect ratio, style, detail level, and more. You add them at the end of your prompt using a double dash (--).

Prompt Combined Parameters Example:
A futuristic cyberpunk city at night, neon lights, rain, cinematic --ar 16:9 --q 2 --s 500 --c 20 --seed 12345

Aspect Ratio (--ar)
Specify the width to height ratio
Ex. castle --ar 3:4
1:1, 3:2, 4:3, 6:5, 16:9

Stylization (--s or --stylize)
Controls how realistic or artistic an image is.
0 = Realistic. MJ follows prompt, more realistic.
1000 = Artistic. MJ takes control, more creative.
Range 0 - 1000
Ex. funny cat --s 250

Raw Mode (Raw Style).
More detail, less MJ artistic control.
Ex. castle --style raw

Chaos or Variety (--c)
Creates more diverse and unexpected results.
Range 0 - 100 with 100 = more chaos
Ex. firefly --c 30

Version (--v or --version)
Switch MJ model version. 6.1 is the default.
Versions 1 - 5, 5.1, 5.2, niji 4, niji 5, niji 6, niji
Niji will create "anime" like images
Ex. young woman --v niji

Weirdness (--w)
Controls how realistic or artistic an image is.
0 = Realistic, follows prompt.
1000 = Artistic. Unique, unexpected effects.
Range 0 - 3000

Personalize (--p)
Based on your personal aesthetic preferences.
Range: on or off. Default is Global profile.

Speed (--relax or --fast or --turbo)
Default is: fast
ex. bird flying --turbo

Quality (--q)
Determines the rendering quality of an image.
Higher values take more time and cost more.
Quality values of 0.5, 1, or 2
--q 1 (default) Standard quality.
--q 2 Maximum detail

Image Prompt

Click to choose or upload image.
Or provide an image url.
Multiple images can be added.

Delete image

Choose one of three options:

1 2 3

1: Character reference (--cref)
Use an image to create new images of the same character.
Ex. dog --cref <image url>

2: Style reference (--sref)
Influence the aesthetic from reference image.
Will create image in the same style.
--sref <value> --sref random --sref <image url>
Ex. --sref 298763012
Ex. house --sref https://123.com/image.jpg
Random will randomly pick a reference image.

3: Image Prompt
Influence the structure, forms and motifs of the reference image. <image url>

Image Weight (--iw)
Set the image prompt weight relative to text weight.
range 0 - 3

Style weight (--sw)
Set the strength of stylization.
Range 0 - 1000
Default 100

Character Weight (--cw)
Set the strength of character consistency.
Range 0 - 100

Seed (--seed)
Ensures consistency across generations by setting a fixed seed number. Useful if you want to create similar images with slight variations.
Range 0 - 4294967295
Default: Random

Options

Open image, click on the options button, click Copy & then Seed for that specific image.

Open in Discord

Prompt
Job ID
Seed
Image
Image URL

Midjourney Parameters
These are used at the end of a prompt

Negative Prompt, No (--no)
What not to include in an image
Ex. forest --no bears
Add commas for additional exclusions.
Ex. forest --no bears, deer, rabbits

Repeat (--r or --repeat)
Run a job multiple times. The number of repeats depends on your subscription plan. The repeat parameter only works in Fast and Turbo modes. It won't work in Relax mode.
Range 0 - 40
Ex. colorful tree --r 5
Midjourney will run 5 sets of results.

Stop (--stop)
To finish a job partway through the process.
Gives a softer, blurry unfinished look to image.
Range 10 - 100
Ex. meadow of flowers --stop 50

Tile (--tile)
Images that can be used as repeating tiles or seamless pattern like wallpaper.
Ex. ocean waves --tile
Use www.pycheung.com/checker/ to check work
"Seamless Texture Checker".

Video (--video)
Generates a short video of the image creation process.

Double Quotations "Title"
Words enclosed in double quotations marks will make those words appear in the image.
Ex. A movie poster with the title "Scary Clown Town" at bottom.

Weights (::)
Weights are used to control the emphasis of different elements in a prompt. By assigning weights, you can influence how strongly MidJourney prioritizes specific words or phrases when generating an image.
Range 0.5 - 3
Ex. futuristic city::1 cyberpunk::2 neon lights::0.5

Negative Weights (::-1)
Can sometimes be used to de-emphasize or discourage elements (though effectiveness varies).

Curly Braces { }
Multiple Results - Permutations
Separate elements within braces by commas.
Ex. interior of house {bedroom, living room, dining room}
This will create 3 sets of prompt results.
interior of house, bedroom
interior of house, living room
interior of house, dining room

Ex. path in the woods --ar {1:1, 2:3, 3:4}
This will return 3 sets of results with different aspect ratios.

*Using curly braces in a prompt is also a way to assign weight or emphasis to specific parts of your text. This is similar to Weights ::, but with a slightly different syntax and effect.

Boosting Importance
Words/phrases inside { } are given higher priority.
Ex. A {mystical} forest with glowing mushrooms

Multi-Level Weighting (Nested Braces)
Ex. A {{magical}} forest with {glowing mushrooms}

Alternative to "::" Weights
Single {word} is equal to word::1.1 (a 10% boost).
Double {{word}} = word::1.2 (20% boost), etc.

Prompt Combined Parameters Example:

A futuristic cyberpunk city at night, neon lights, rain, cinematic --ar 16:9 --q 2 --s 500 --c 20 --seed 1268745

Parameter

Space

Use a space between a parameter and it's value. --ar 19:9
Use a space between the value and the next parameter.

After creating your image, there are more tools to modify your image. Upscale, variations, remix, editor and zoom out. https://docs.midjourney.com/hc/en-us/articles/33329329805581-Modifying-Your-Creations

Prompt Descriptive Words

forest with individual trees birds **--tile**

Creates repeating pattern.

describe this image and put it into a Midjourney prompt

This image features an adorable, stylized cow with large, expressive eyes and a colorful, whimsical appearance. The cow has a warm orange and white coat, decorated with intricate patterns and shading. It wears a blue, flower-adorned sweater with gold buttons, giving it a cozy and charming aesthetic. Its ears and horns have a soft, curved design, and its tail is adorned with leaves. The overall art style is a mix of fantasy and folk art, with a painterly, digital illustration feel.

Midjourney Prompt:

"A whimsical, adorable cow with large expressive eyes, dressed in a cozy blue sweater adorned with embroidered flowers and golden buttons. The cow has an orange and white coat with soft shading and folk-art-inspired patterns. Its tail is decorated with delicate leaves, and a small flower sits between its curved horns. The illustration is highly detailed, with a painterly, fantasy folk-art style, vibrant colors, and a warm, storybook aesthetic."
